COO FINDING

S07 and S03 are the priority stores. Both show elevated returns and delivery costs; S07 has the largest P&L loss.

BUSINESS RECOMMENDATION

- Investigate returns at S07 and S03.
- Audit partner handoffs and timestamps.
- Pilot changes and track return rate, delivery cost and contribution/order.

₹ OPPORTUNITY

₹1.88L/month modelled opportunity

Potential return-cost reduction at S03 and S07. Scenario only—not guaranteed savings.

WHAT WOULD MAKE US WRONG?

Product mix, customer behaviour or data errors may explain the return gap. Validate before attributing it to partners.

Healthy Benchmark			
contribution/order	Healthy delivery cost/order	Healthy Return Rate	Healthy Net Revenue/order

COO Decision — Investigate S03 and S07 first

What is broken? Both stores have unusually high return rates among the flagged partner cohorts, alongside elevated delivery costs and late-delivery rates.

Modeled opportunity: Approximately ₹1.88 lakh per 30 days if cohort return rates reach the same-store rates of other partners.

What should we do?

- Audit return reasons, order handoffs, and trip timestamps for the flagged cohorts.
- Check order mix and partner allocation before attributing the issue to partners.
- Run a controlled operational pilot and track return rate, delivery cost per order, and contribution.

What could make us wrong? Differences in customer behavior, order mix, return coding, or timestamp quality may explain some of the observed gap. The financial estimate is not guaranteed savings.
